TO WHOM IT MAY CONCERN

I have had the opportunity of listening five lectures by Eric Scerri: Banff (Canada, 2003), Coburg (Germany, 2008), Cartagena (Colombia, 2009) and Bogota (Colombia, 2009, 2011). Besides Eric's deep knowledge of chemistry, particularly on the periodic table (history, philosophy and teaching), he is a very good lecturer, always keeping the attention of his listeners. His lectures are always well documented and supported on academic facts, something that has served to get Eric Scerri as an authority on philosophy of chemistry and particularly in the different aspects of the periodic table. The motivation he inspires when lecturing is something I have witnessed. I count myself in the wealth of young scholars (I was one of those in 2003) captivated by the topics of his research to that extent that a big part of my current research started by reading Eric papers and books and by listening his lectures.

Sincerely yours,

Guillermo Restrepo
